DESCRIPTORS: Friction. *Machine tools. *Tool steel.
Metal forming presses. Life expectancy. Ceramic
materials. Tools.

It is shown that the knowledge of wear phenomena in
metal working is becoming increasingly important.
With tool steel and high speed steel, a clear criterion
can be given without reference to the course of wear;
with hard metal only the choice of definitely permissi-
ble wear applies. With ceramic material there is a
similar problem. (Machine Tools, v. 7, no. 9)
